# Honey bee

In summer, a honey bee spends its day flying from \_\_\_\_\_ to flower, collecting a sugary liquid called nectar. The bee takes the nectar back to its hive and turns it into \_\_\_\_\_. This will be its winter food. Bees also collect a dust called \_\_\_\_\_ from the flowers to feed the baby bees in the hives.

A honey bee beats its wings so fast it makes a \_\_\_\_\_ noise.

Fine hairs all over the bee's body pick up \_\_\_\_\_.

A sharp \_\_\_\_\_ is useful for fighting off enemies.

The bee carries pollen home in the areas on its back legs called \_\_\_\_\_.

This part of the flower is covered in yellow \_\_\_\_\_.
