# Cycads

Cycads are big plants that look much like large \_\_\_\_\_ trees. Their leaves look like \_\_\_\_\_ leaves. By cycads are not palm trees or ferns. Instead, cycads are related to other trees that make \_\_\_\_\_. There are many kinds of cycads, but they live only in a few \_\_\_\_\_, warm parts of the world. Cycads may live up to 1,000 years.

The cycad's long, tough \_\_\_\_\_ looks like fern leaves.

Heavy \_\_\_\_\_ hold the cycad's seeds. The cones may grow up to 90 centimetres long!

The \_\_\_\_\_ is rough.

The branchless \_\_\_\_\_ stands straight up.
